Dots in the sections above are a guide to briefing impact

This briefing is to advise that on the 10th January 2011 we introduced a new billing mediation component (BTW - Billing Brief Update 22/11/2010) and as part of the migration work we need to make a further configuration change to the system and are planning the first stage on Tuesday 7th June 2011.

The change will have two impacts and will affect those Wholesale Calls customers who use the four-hourly unrated "fraud" files.

Please note there are no impacts on the rated Daily Call Files.

The first tranche will only impact the two mediator nodes, which have the NNI value of 9673326 and 1673326: -

1. To allow some minor configuration changes to be implemented we will have to suspend the polling of the call records from the above mediator nodes for up to two hours. This will delay around 7% of all Wholesale Calls traffic for up to two hours on that day.
2. Currently we have five servers collecting the data from the network and this change only impacts the two nodes (One server) mentioned above, so not every file will be impacted. The file naming convention will remain the same and there is no change to the data within the file.
3. On the date stated, for the mediator nodes of 9673326 and 1673326, both will have their sequential generation file number reset to 0001.

Once this change has proved successful, we intend to do exactly the same with the other four mediator nodes in a weekly cutover starting on 14th June 2011. This will cause the resetting to 0001 of file sequence numbers for two NNI numbers for each node, starting with 9686593 and 1686593 on Tuesday 14th June 2011. This will be repeated on three subsequent dates namely 9673324/1673324 on 21st June 2011, 9673325/1673325 on 28th June 2011, concluding with 9686592/1686592 on 30th June 2011.

These dates are provisional and we will confirm the exact dates shortly after the first cutover has completed.
